Waivers/Conditions:

Authorization on a secondary basis.

Antenna structures for land, base and fixed stations authorized for operation at temporary unspecified locations may be erected without specific prior approval of the Commission where such antenna structures do not exceed a height of 60.96 meters (200 feet) above ground level; provided that the overall height of such antennas more than 6.10 meters (20 feet) above ground, including their supporting structures (whether natural formation or man-made), do not exceed any of the slope ratios set forth in Section 17.7(b). Any antenna to be erected in excess of the foregoing limitations requires prior Commission approval. Licensees seeking such approval should file application for modification of license. In addition, notification to the Federal Aviation Administration is required whenever the antenna will exceed 60.96 meters (200 feet) above the ground and whenever notification is otherwise required by Section 17.7 of the Commission's Rules. Such notification should be given by filing FAA Form 7460-1, Notice of Proposed Construction or Alteration, in duplicate, with the nearest office of the Federal Aviation Administration, which form is available from that office.

Temporary operations are authorized on a secondary basis and must protect all exclusive or centralized trunked licensees pursuant to Rule § 90.187, regardless of whether the temporary operations were authorized before or after the exclusive or centralized trunked licensee

Per Rule 90.305(a) temporary base station shall be located not more than 80 kilometers (50 miles) from the geographic center of the urbanized area listed in Rule 90.303.

Grant of FB8 status is conditional on licensee meeting loading requirement. The Commission may, without notice of hearing, change the station class code to remove the protection status of FB8 facilities based on the loading/operational status of the facilities at construction deadline.
