FIRST SUBSTANTIAL SERVICE BENCHMARK SHOWING FOR CALL SIGN **WPTZ776**

The State of Texas files the attached showing to demonstrate compliance with the first substantial service benchmark coverage of one-third of the state population by June 13, 2014.

Rule section 90.529 (b)(1) requires the state to certify on or before the applicable benchmark that it is providing or prepared to provide substantial service to one-third of their population or territory.

In certifying compliance with the initial benchmark, Texas intends to demonstrate coverage to more than one-third of the state population. In determining the percentage of the state population covered by various networks in Texas, the state used the alternative method of mobile coverage maps to show the coverage footprint of the systems that are being used by TX DPS. The bureau generally considers the 40 dBuV/m F(50, 50) signal level as the defining service contour for the 700 MHz narrowband licenses, the F(50,50) means that the predicted electromagnetic field strength occurs at 50% of the receivers 50% of the time. The shape files used to determine population coverage are based on Round trip Mobile coverage using a 35 watt Mobile radio with a ¼ wave whip antenna. The antennas are installed on the roof center of the car. The maps are based on 95% covered area reliability with Delivered Audio Quality 3.0.

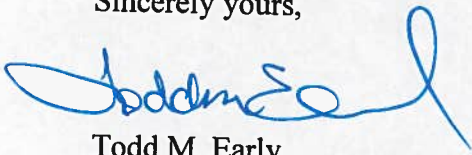

The call sign referenced above (WPTZ776) is part of multiple networks in Texas incorporating TxWARN, Lower Colorado River Authority and the GATRRS System which includes South Texas Development Council and Middle Rio Grande. These interconnected systems are used for public safety and public service communications by the Texas Department of Public Safety, Texas Department of Transportation and numerous other government agencies, and will facilitate further interoperability with city and county public safety communications systems.

The various interconnected networks using these frequencies currently use over 80 sites scattered throughout North, East and South Texas covering some of Texas most populated counties.

Virtually every frequency listed in the referenced license is in use in one or more locations in the state. Currently, approximately 50.54 % of the population of the State of Texas is serviced based on the 2010 U.S. Census Bureau data. While there are sites identified in this document as "proposed", none of those sites were used in the calculation of the covered population. Future expansion of the listed systems plus additional connected systems will eventually cover more of Texas to achieve 66% coverage as required to meet the 2nd Substantial Service Benchmark requirement in 2019.

A number of attachments accompany this submittal. These include a summary sheet showing Population Covered verses associated system, a master spread sheet showing all of the frequencies and locations in use in the various systems, a coverage plot showing the total covered area for the combined systems, and individual coverage plots for each system.

Sincerely yours,

Todd M. Early
Deputy Assistant Director
Texas Department of Public Safety

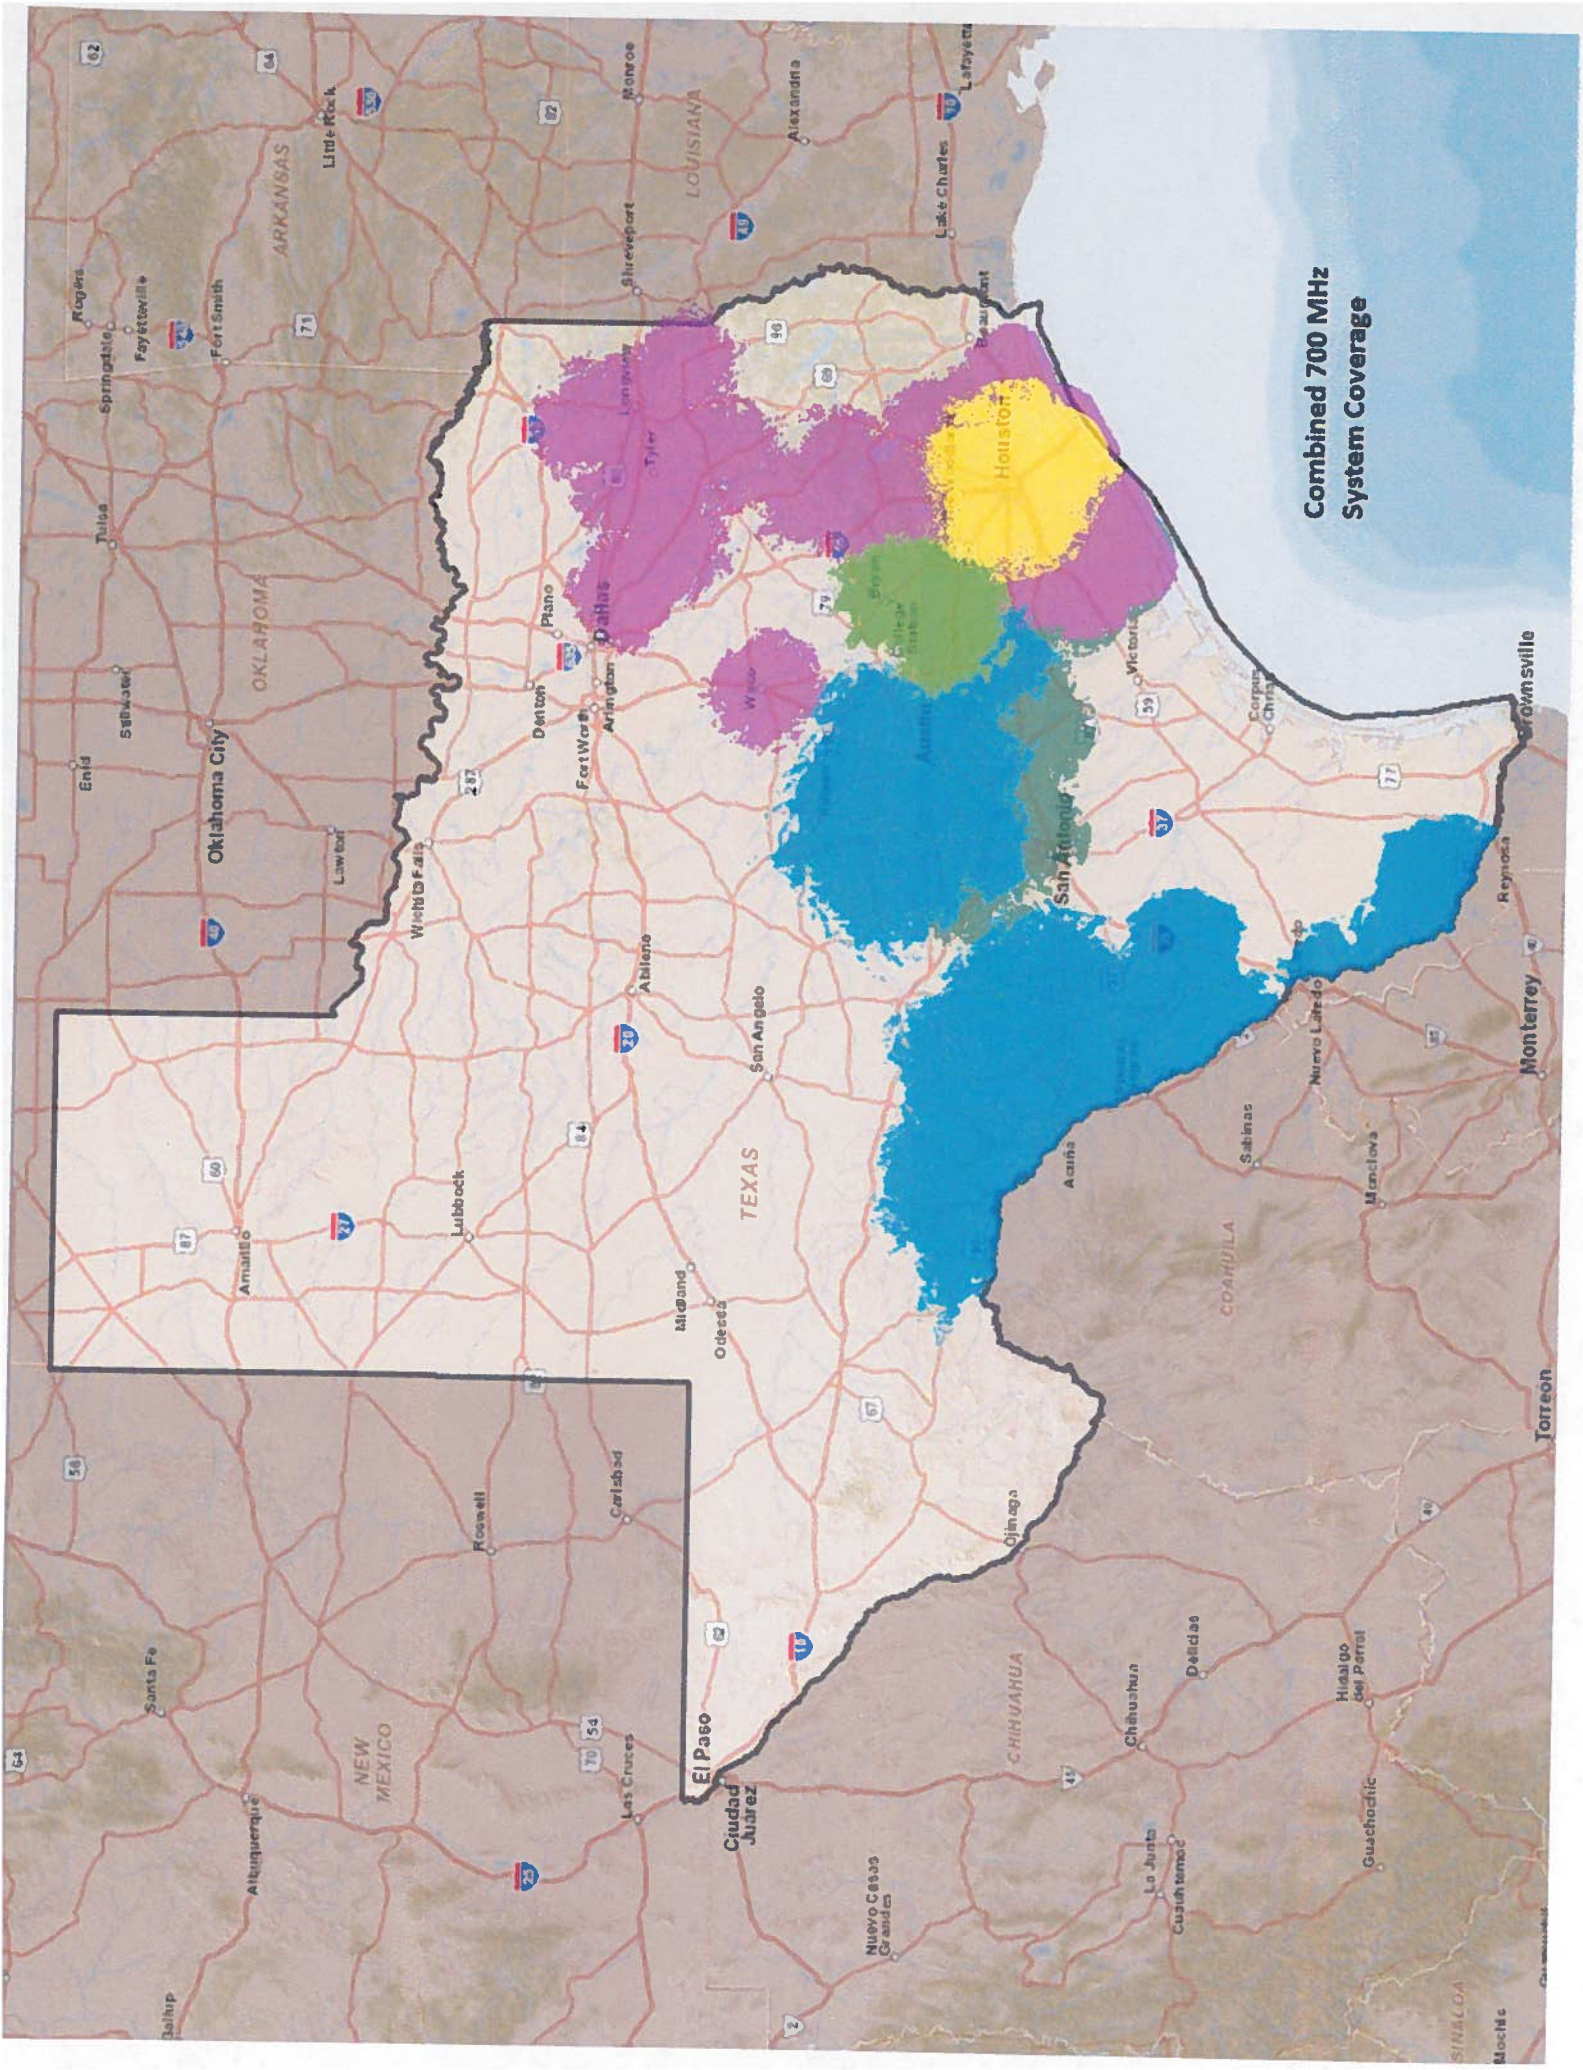

Texas Coverage

all numbers are from 2010 Census information

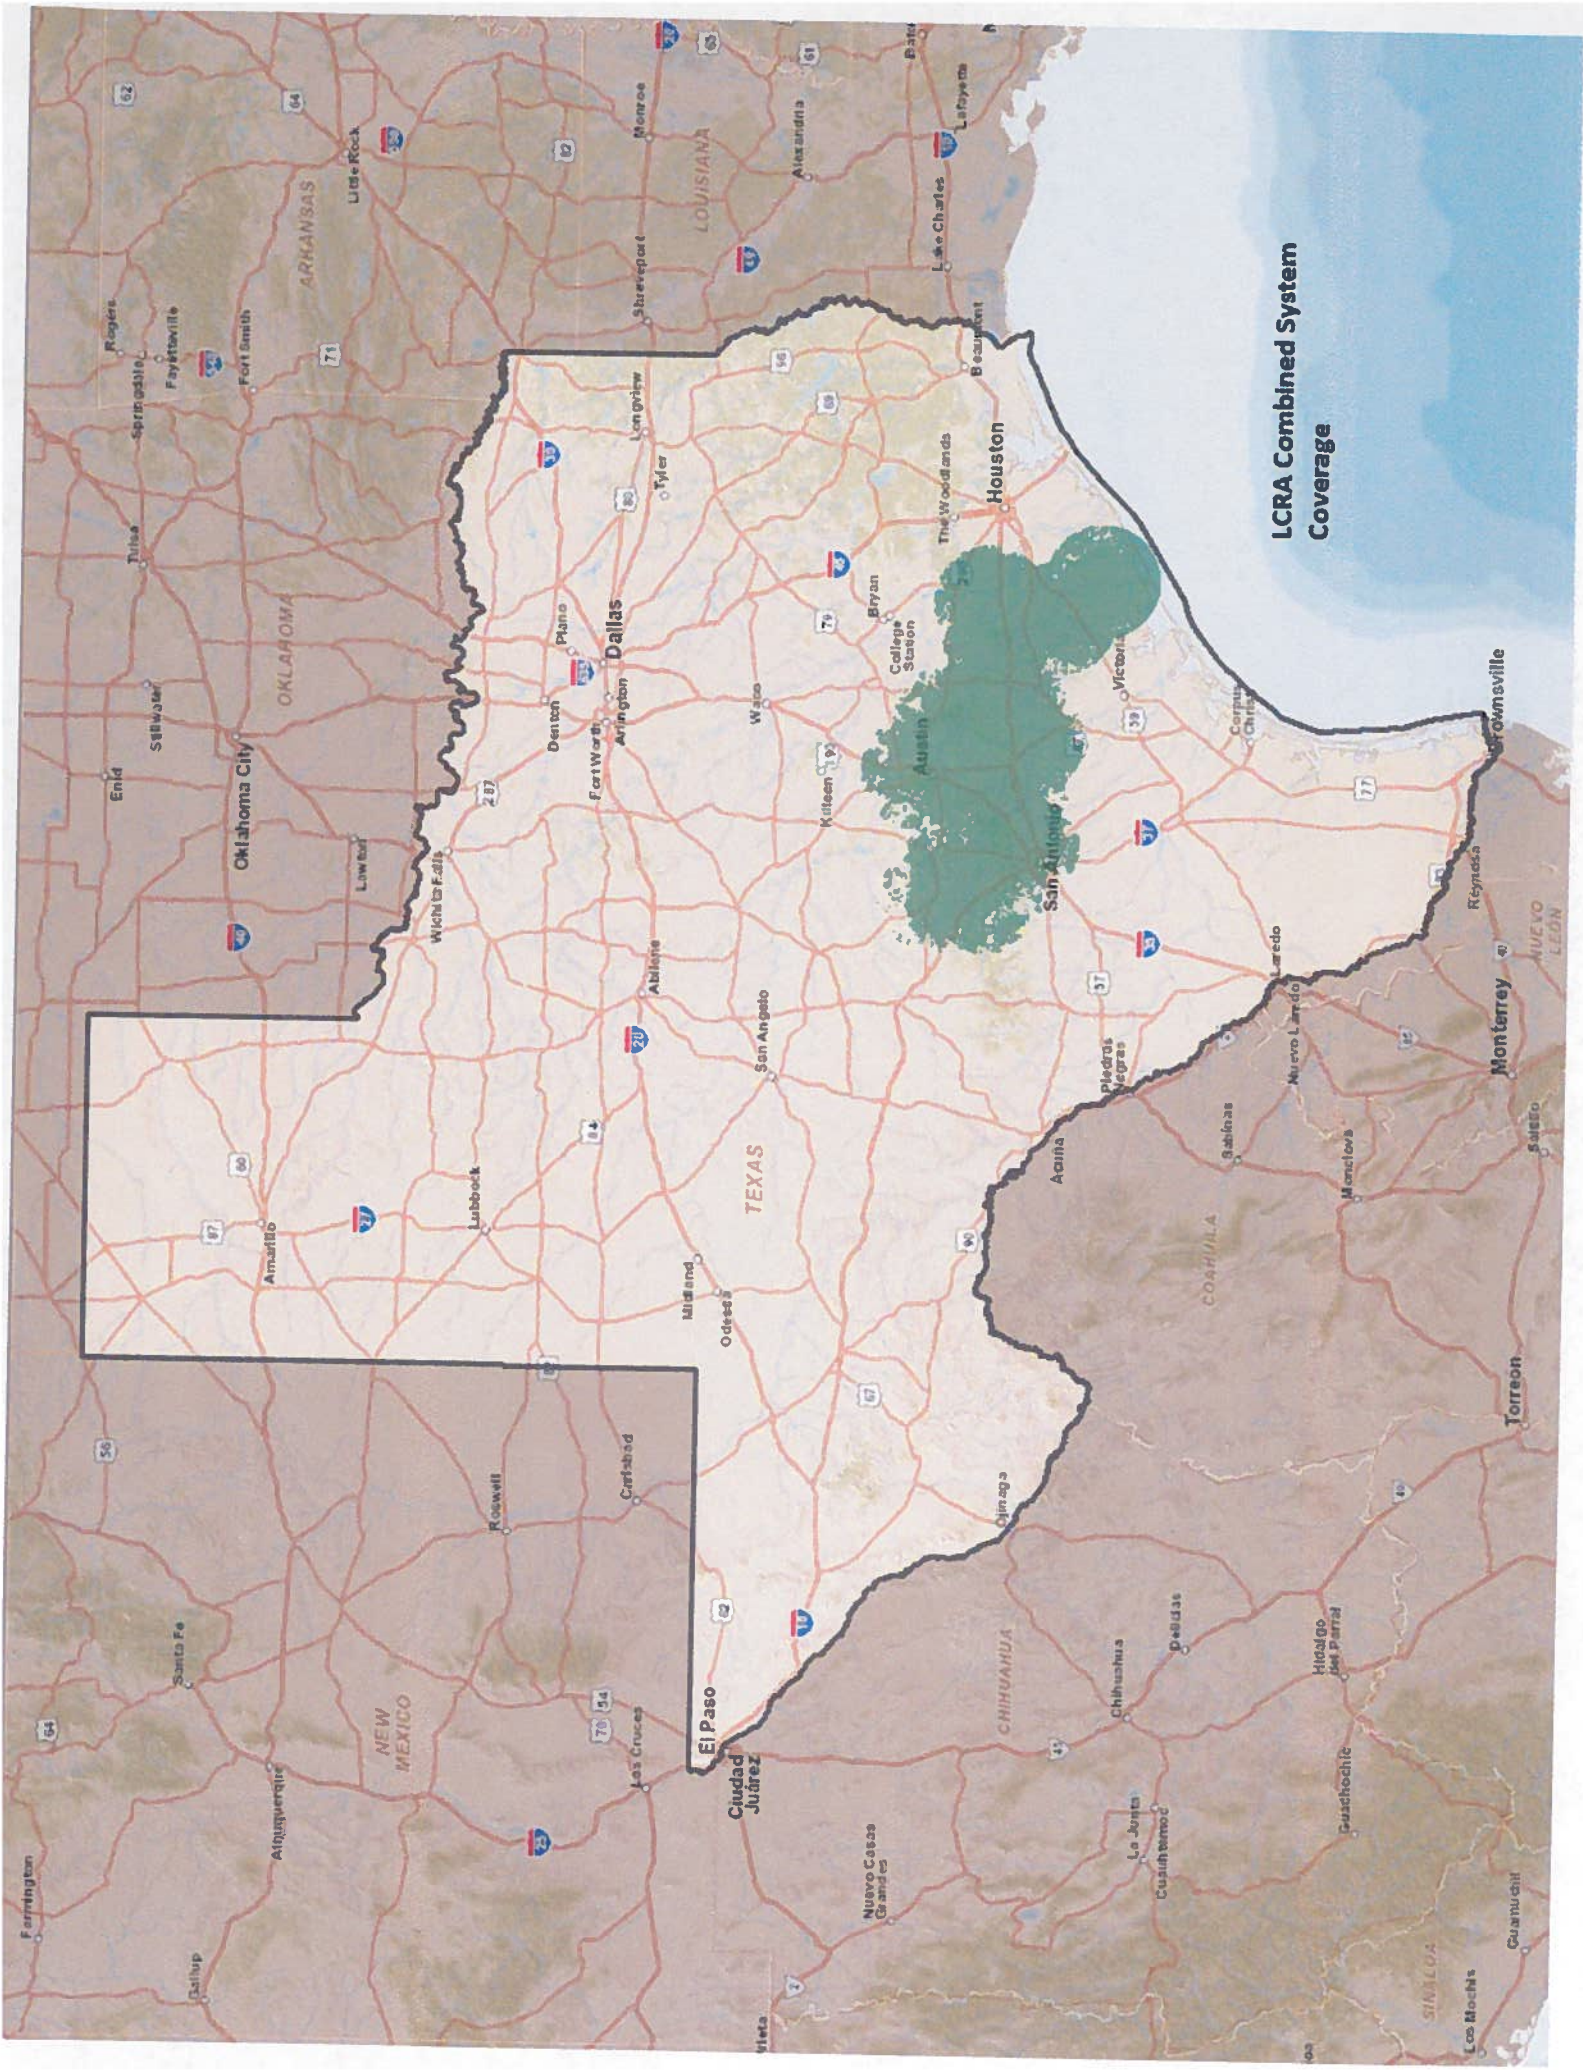

<i>State</i>	<i>Total Population</i>	<i>Percentage</i>
TEXAS	25,145,561 (numbers matches Census Bureau website)	100.00%

<i>System</i>	<i>Population Covered</i>	<i>Percentage</i>
LCRA	3,759,776	14.95%
TxWARN	7,708,204	30.65%
Harris County Em. Svc. District #9	5,804,521	23.08%
BVCOG	355,558	1.41%
GATRRS	3,112,467	12.38%
<i>All Systems (combined)</i>	<i>12,708,826 *</i>	<i>50.54%</i>

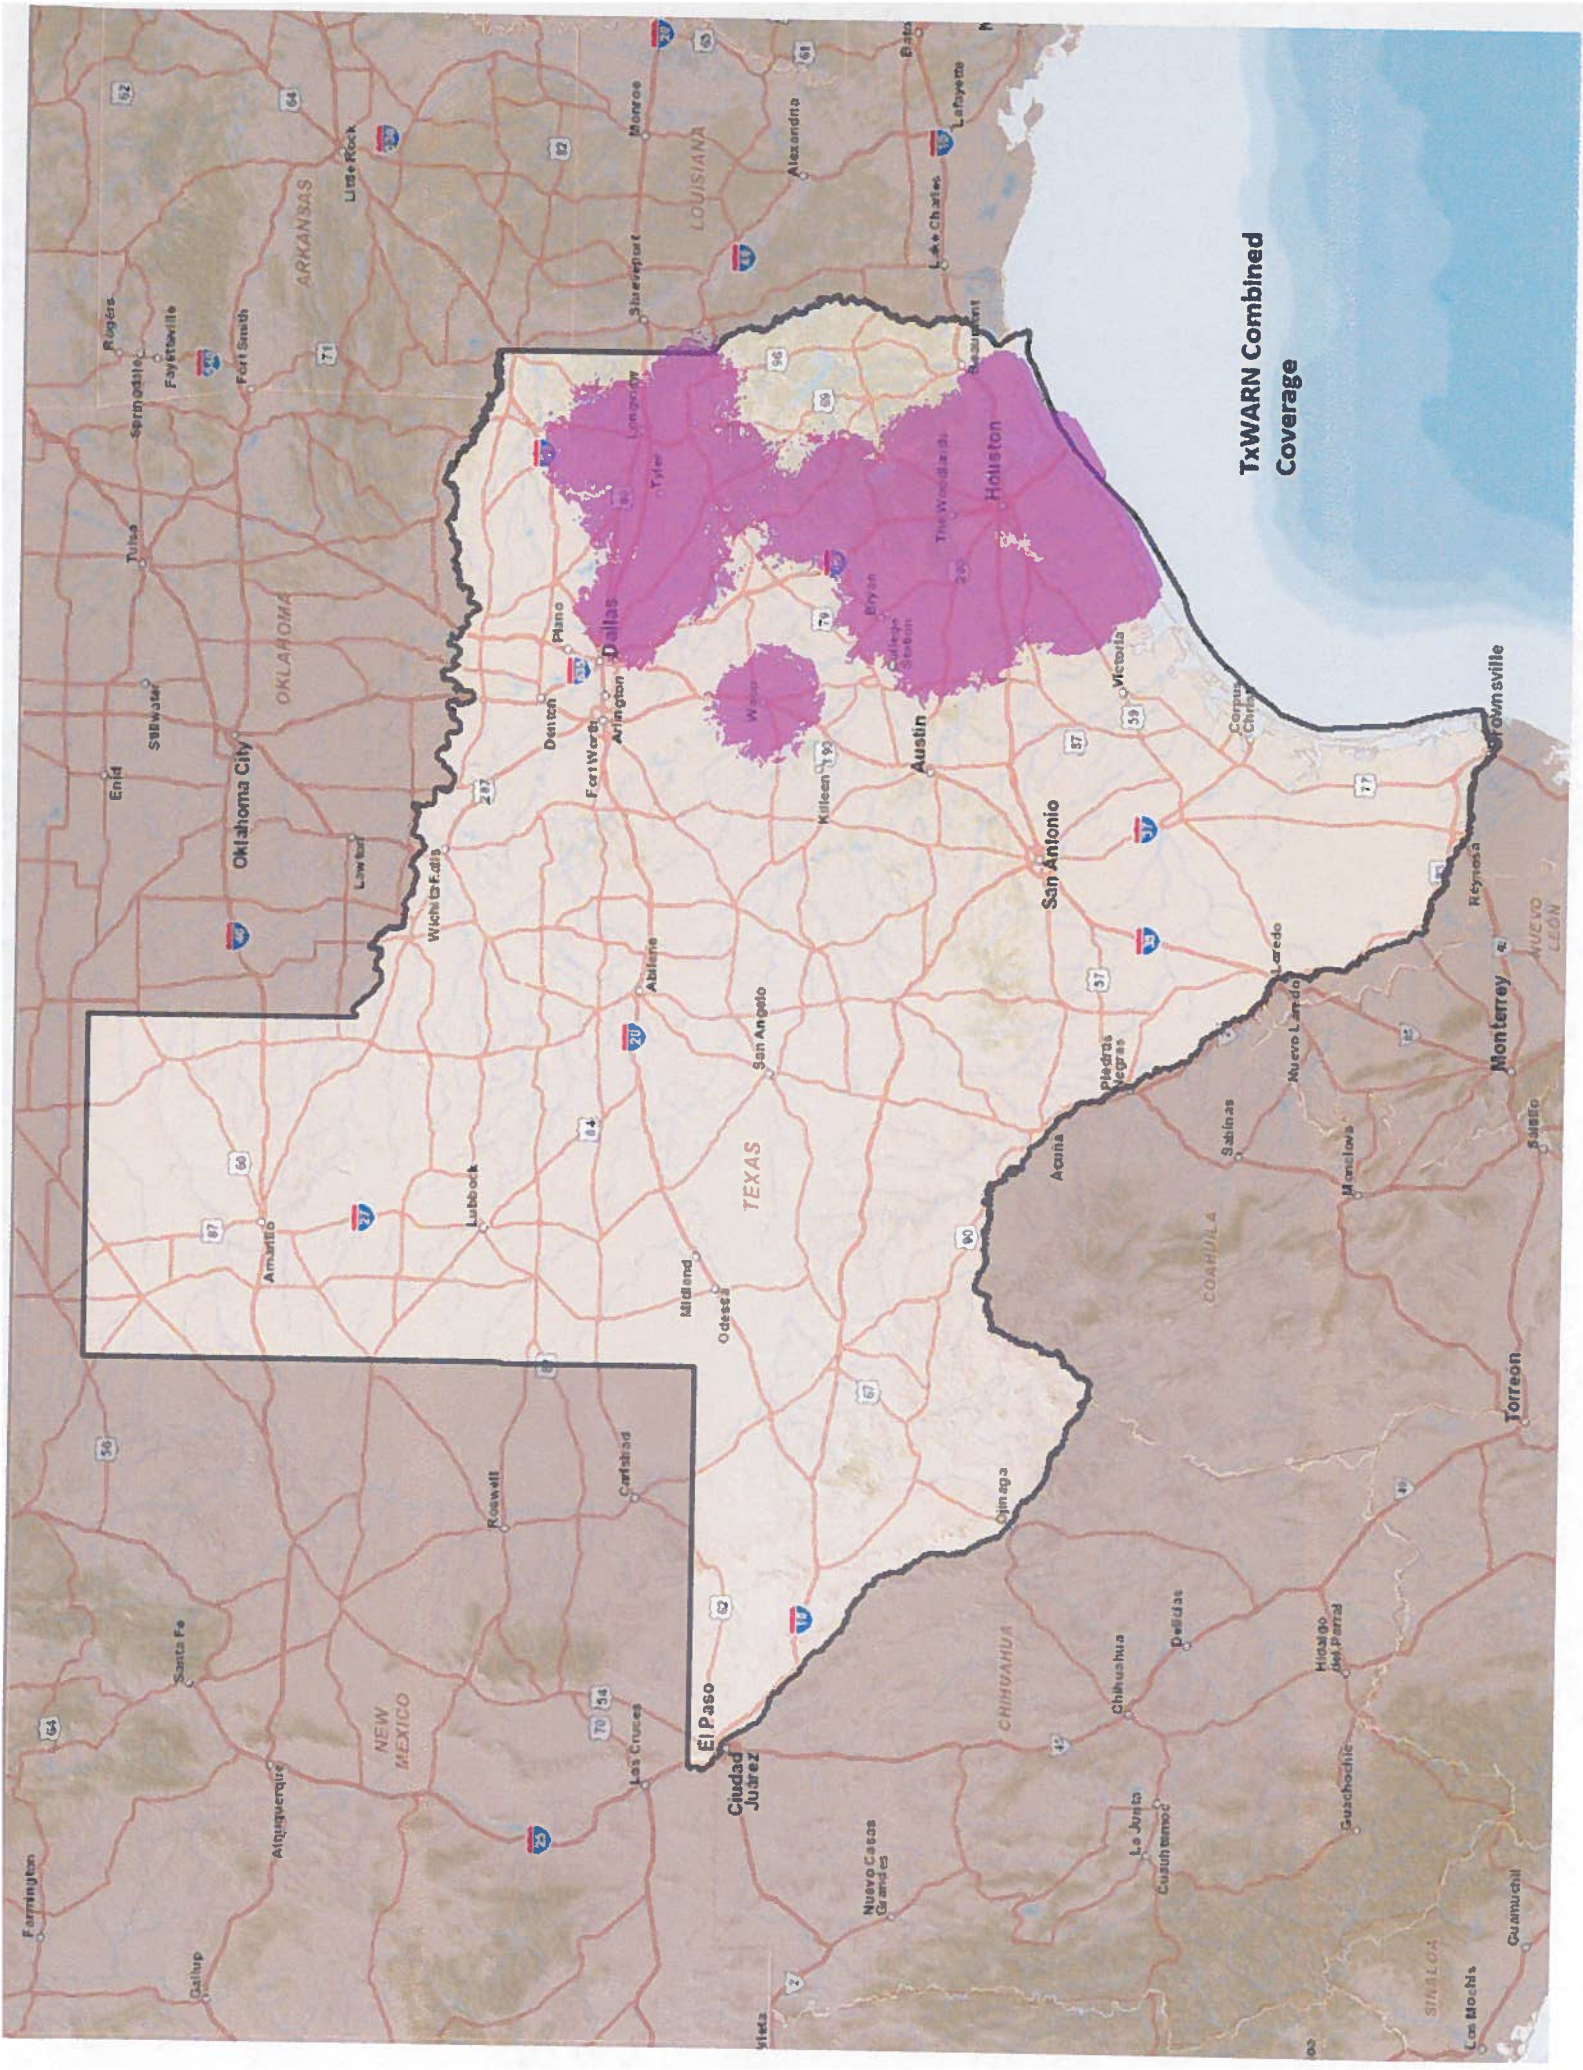

* Number shown is actual Population Covered with overlap between systems subtracted

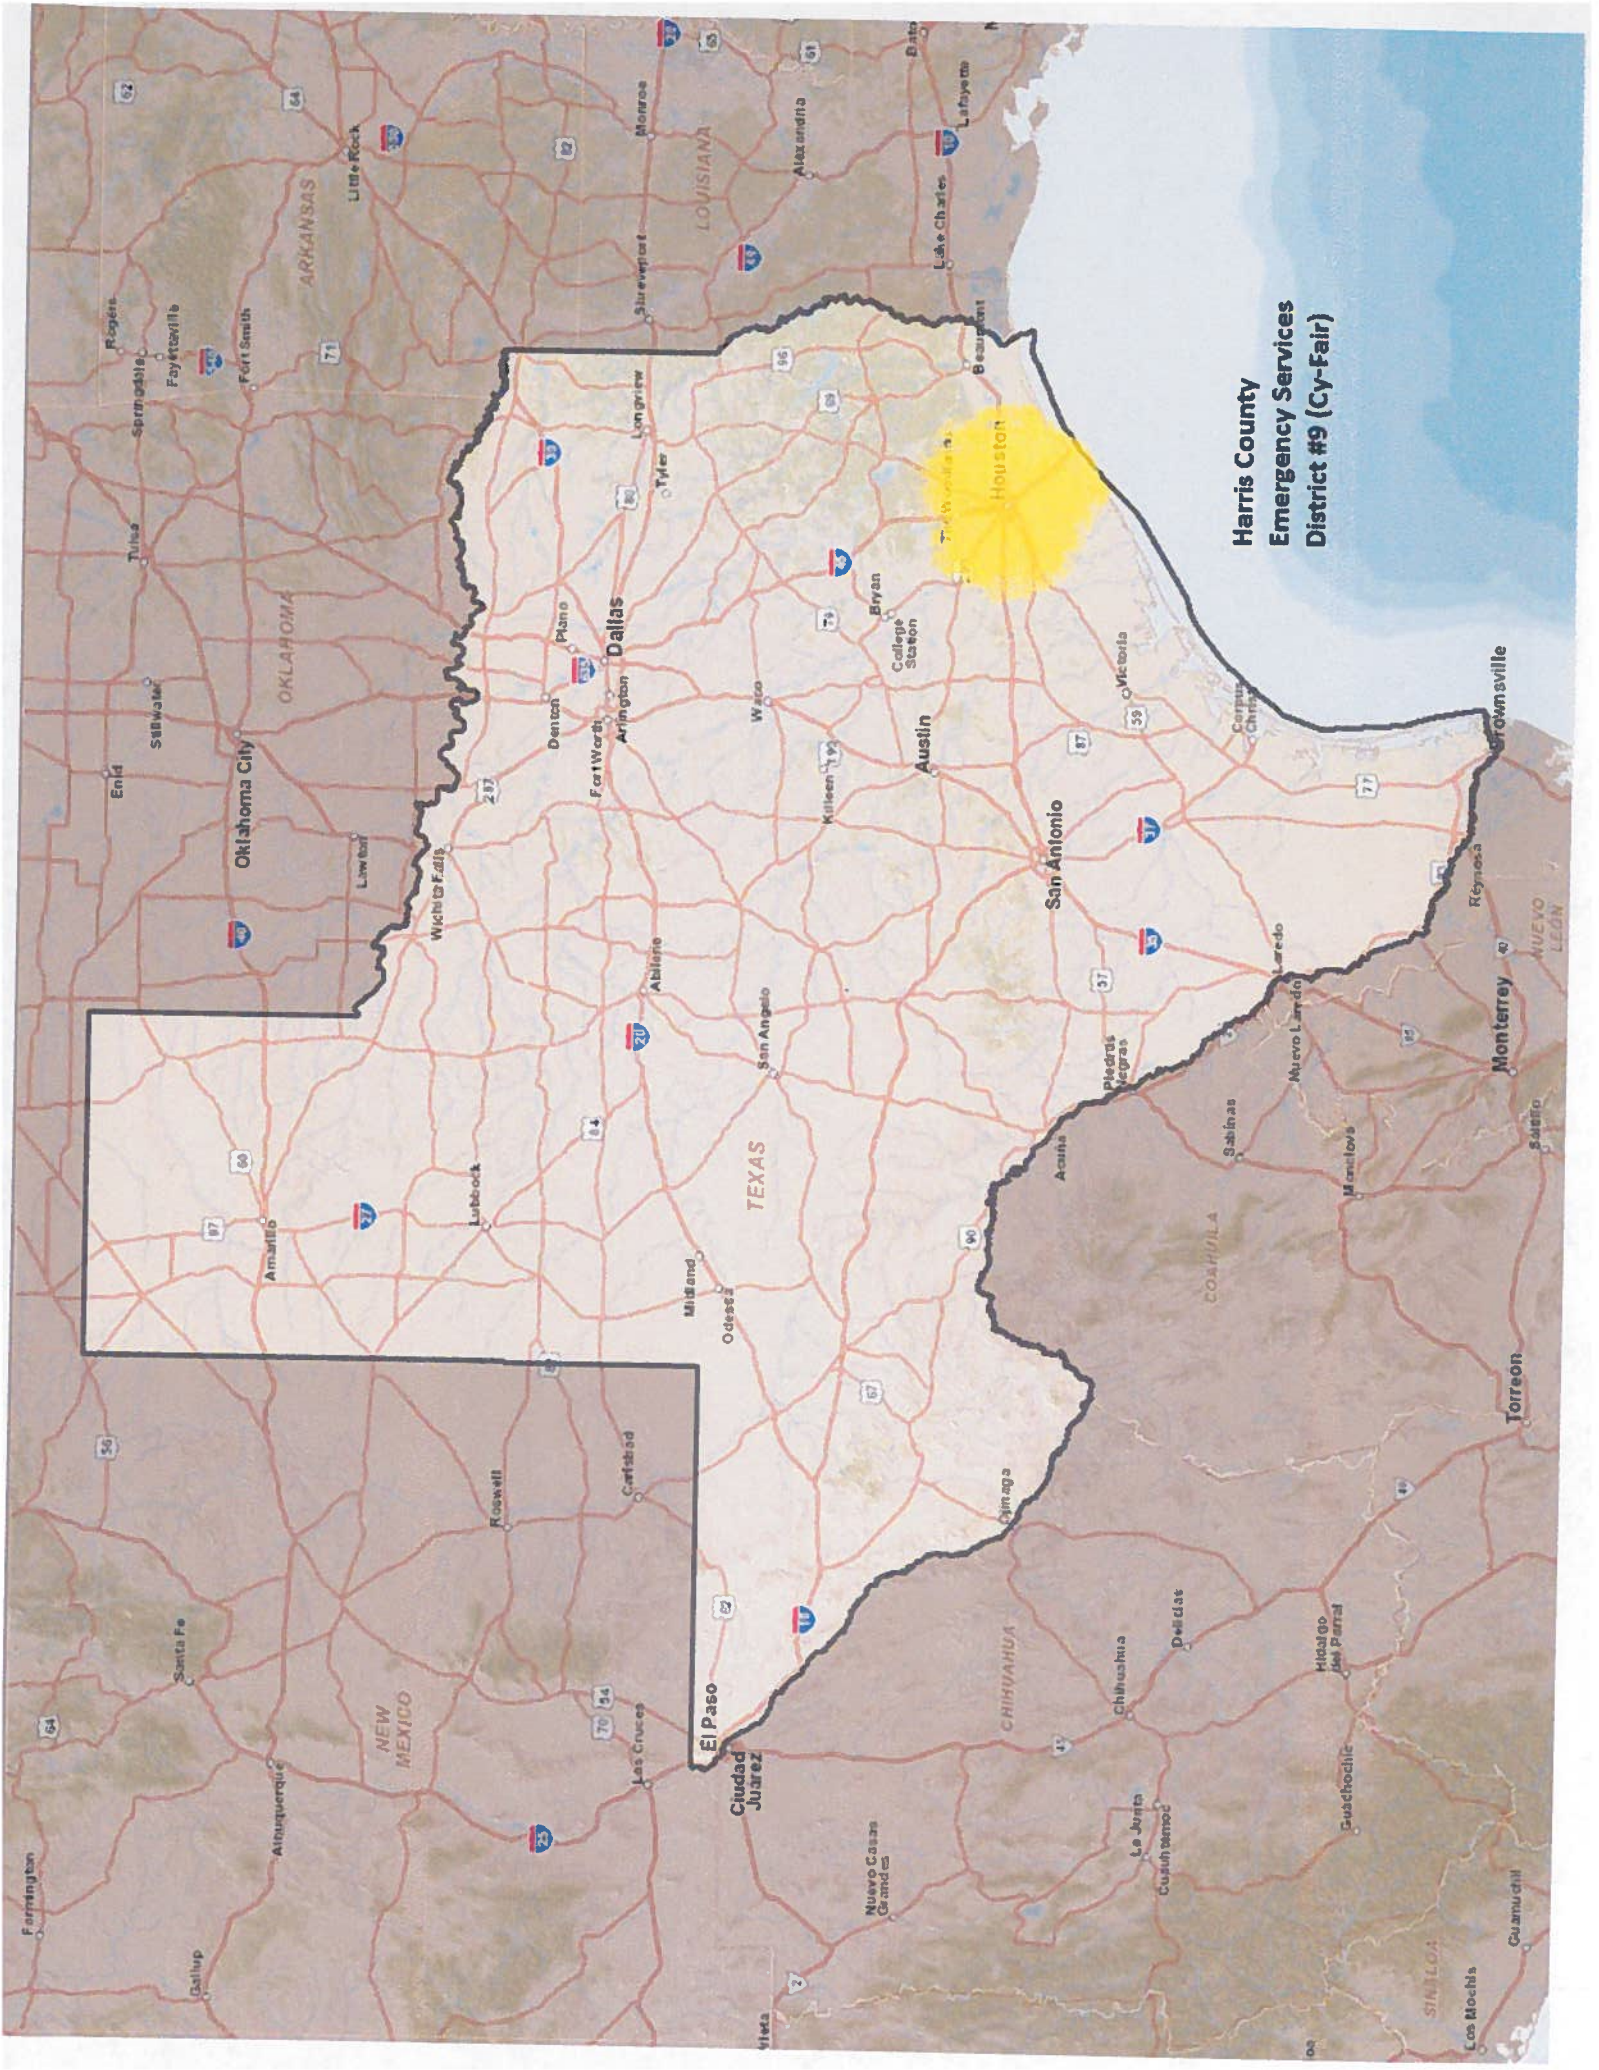

**Combined 700 MHz
System Coverage**
